Installation instructions for pegboard models listed on page 2 using the Triton Products Spacer Kit #70016

Tools Required:

- Level
- Pencil
- Philips Screwdriver
- Drill
- 5/16" Drill Bit
- For concrete installations we recommend using a center punch and pilot hole

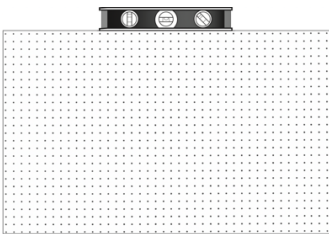

Step 1

Locate the illustration on page 2 for the model you are installing and use as a guide to mark the holes in Step 2.

Step 2

Place the pegboard in the desired location and make sure it is level, now mark the holes in the illustration.

Note: If you are installing 2 boards, we recommend the following 2 options. **#1** draw a line down the side of the first board where the second board will meet up to it. This line will be a guide to install the second board. **#2** you can also temporarily mount the first board with a couple screws without spacers and put the second board next to it and repeat Step 2.

Step 3

Drill all marked holes with a 5/16" drill bit, make sure to keep the drill level and don't let the drill bit walk so the anchors fit snug and your holes line up with the pegboard. If you are installing on concrete, we recommend using a center punch followed by a pilot hole. Now insert a wall anchor in each hole.

Step 4

Place a screw in each of the pegboard holes with the spacer on the backside as shown below in **Fig. 1**. **Note:** the spacers fit snug on the screws, so make sure to follow **Fig. 1** to make it easier to line up screws into the wall anchors.

Start all screws with a few turns, then go around in a uniform fashion and tighten all screws flush as shown in **Fig. 2**
